ELEN060-2: Source coding, data compression and channel coding

Arthur Louis[1] and **Adrien Saulas**[2]
[1] *alouis@student.uliege.be (s191230)*
[2] *adrien.saulas@student.uliege.be (s184481)*

Course given by **Louis Wehenkel**[1], **Anthony Cioppa**[2] and **Gaspard Lambrechts**[3]
[1] *l.wehenek@uliege.be*
[2] *anthony.cioppa@uliege.be*
[3] *gaspard.lambrechts@uliege.be*

CONTENTS

I. Implementation 1
A. Binary Huffman Code 1
B. On-Line Lempel-Ziv Encoding 1
C. Comparison of the Lempel-Ziv Algorithms 1
D. LZ77 Algorithm 1

II. Source Coding and Reversible (Lossless) Data Compression 1
A. Display of Images and analysis of files 1
B. Estimation of the Marginal Probability Distribution of all Symbols from the PNG and Corresponding Huffman Code 1
C. Expected Average Length for the Huffman Code 2
D. Evolution of the Empirical Average Length 2
E. Encoding the PNG using the On-Line Lempel-Ziv Algorithm 2
F. Encoding the PNG using the LZ77 Algorithm 2
G. Combining LZ77 and Huffman Code 2
H. Applying the combination of LZ77 and Huffman Code to the PNG Sequence 2
I. Lengths and Compression Rates of the Different Algorithms with Different Windows 2
J. Encoding Direclty the Pixel Sequence 2
K. Comparison of the Huffman Code of the PNG and Pixel Sequence 2

III. Channel Coding 2
A. Reading and Encoding the Text Signal 2
B. Channel Effect on the Binary Text Signal 2
C. Introducing Redundancy with Hamming Code 2
D. Channel Effect on the Binary Text Signal with Redundancy 2
E. Transmission over a Binary Symmetric Channel 2
F. Reducing the Probability of Errors 2

I. IMPLEMENTATION

A. Binary Huffman Code

1

B. On-Line Lempel-Ziv Encoding

2

C. Comparison of the Lempel-Ziv Algorithms

3

D. LZ77 Algorithm

4

II. SOURCE CODING AND REVERSIBLE (LOSSLESS) DATA COMPRESSION

A. Display of Images and analysis of files

5

B. Estimation of the Marginal Probability Distribution of all Symbols from the PNG and Corresponding Huffman Code

6

C. Expected Average Length for the Huffman Code

7

D. Evolution of the Empirical Average Length

8

E. Encoding the PNG using the On-Line Lempel-Ziv Algorithm

9

F. Encoding the PNG using the LZ77 Algorithm

10

G. Combining LZ77 and Huffman Code

11

H. Applying the combination of LZ77 and Huffman Code to the PNG Sequence

12

I. Lengths and Compression Rates of the Different Algorithms with Different Windows

13

J. Encoding Direclty the Pixel Sequence

14

K. Comparison of the Huffman Code of the PNG and Pixel Sequence

15

III. CHANNEL CODING

A. Reading and Encoding the Text Signal

16

B. Channel Effect on the Binary Text Signal

17

C. Introducing Redundancy with Hamming Code

18

D. Channel Effect on the Binary Text Signal with Redundancy

19

E. Transmission over a Binary Symmetric Channel

20

F. Reducing the Probability of Errors

21
